CIAO ELASTIC ELEMENTS IN PLASTIC AND STAINLESS STEEL

CIAO elastic elements are entirely manufactured in plastic and stainless steel; therefore, especially suitable for food - pharmaceutical industries as well as for all applications affected by corrosion problems. CIAO items are elastic elements with rotational work. The elastic deformation of four cylinders made of natural rubber, lodged inside the place that result when two elements with square section are turned at an angle of 45° one to the other, produces high elasticity and high resistance to shocks, vibrations and oscillations. Maximum rotation angle is $\pm 30^\circ$. Special design guarantees silent performances and high reliability, allows several advantageous installation solutions and solves easily application problems. These elements can be used in many fields and various applications: chain tensioners, belt tensioners, shock absorbers, vibration dampeners, downholders, decelerators, elastic supports, etc. Product size and technical data are explained near each element. Page CIAO products have the advantage to be interchangeable with CRESA products, thanks to their load capacity and size. Automatic rotation tensioners theory and assembly instructions; see chapter C (from Pag.C13 to Pag.C17).

CIAO ELEMENTI ELASTICI IN PLASTICA ED INOX

Gli elementi elastici CIAO sono costruiti interamente in materiale plastico ed acciaio INOX; quindi particolarmente utili nel settore alimentare - farmaceutico ed in tutte le applicazioni ove esistano problemi di ruggine. Gli articoli CIAO sono elementi elastici con funzionamento a rotazione. L'elevata elasticità e la grande capacità di assorbimento di urti, colpi, vibrazioni e oscillazioni è prodotta dalla deformazione elastica di quattro cilindri di gomma alloggiati nei vani risultanti dall'accoppiamento di due elementi a sezione quadrata ruotati di 45° l'uno rispetto all'altro. L'angolo di rotazione che può raggiungere è di $\pm 30^\circ$. La particolare costruzione garantisce un funzionamento silenzioso, di grande affidabilità, permette innumerevoli vantaggiose soluzioni di montaggio ed inoltre risolve con semplicità i vari problemi applicativi. I settori di impiego sono molteplici e moltissime le applicazioni quali: tendicatena, tendicinghia, ammortizzatori, antivibranti, pressori, deceleratori, supporti elastici, ecc. Il dimensionamento e gli specifici dati tecnici di funzionamento dei prodotti, sono descritti a lato di ogni singolo particolare. I prodotti CIAO, inoltre offrono il vantaggio di essere intercambiabili con prodotti CRESA, per capacità di carico e geometria. Per la teoria sui tenditori automatici a rotazione e per le istruzioni di montaggio si rimanda al capitolo C (da Pag.C13 a Pag.C17).

HOW TO USE THE HOLE J IN PX AND PX-R COME UTILIZZARE IL FORO J NEI PX E PX-R

Fig.1

The tensioner is provided with the "A" hole only. The "J" hole is indicated with a reference mark.

Fig.2

With a drilling operation on the reference mark You can make the J hole.

Fig.3

The KIT assembly on the hole J is the same of the hole A.

Il tenditore si presenta con il solo foro A. Il foro J è indicato con un centrino.

Con una foratura in corrispondenza del centrino si realizza il foro J.

Il montaggio del KIT sul foro J è il medesimo che per il foro A.

APPLICATION EXAMPLES / ESEMPI DI APPLICAZIONE

CIAO

KIT FOR BELT

Type - Tipo: **XRP****USE**Shielded plastic roller
Rullo in plastica schermato

UK MATERIALS Roller and stoppers are made of black polyamide, steel bearings, spacers and screws are made of stainless steel.
USE Temperature $\leq 70^{\circ}\text{C}$.

IT MATERIALI Rullo e tappi in poliammide nero, cuscinetti in acciaio, distanziali e viti in acciaio inox.
IMPIEGO Temperatura $\leq 70^{\circ}\text{C}$.

⊙ For polyamide-roller : Screw "M"
Per rullo in poliammide : Vite "M"

Type - Tipo: **XRU****USE**Shielded INOX roller
Rullo INOX schermato

UK MATERIALS Roller, spacers and screws are made of stainless steel, steel bearings, stoppers are made of black polyamide.
USE Temperature $\leq 70^{\circ}\text{C}$.

IT MATERIALI Rullo, distanziali e viti in acciaio inox, cuscinetti in acciaio, tappi in poliammide nero.
IMPIEGO Temperatura $\leq 70^{\circ}\text{C}$.

* For stainless steel-roller : Screw "P"
Per rullo in acciaio inox: Vite "P"

WORK FIELD / CAMPO DI LAVORO

Type Tipo	Ø Roller Rullo	Max rpm Numero di giri max	Bearing Cuscinetto
XRU1	30	8000	608
XRU 2/3	40	8000	6200
XRU 4	60	6000	6301

Type Tipo	Ø Roller Rullo	Max rpm Numero di giri max	Bearing Cuscinetto
XRU 1	30	8000	608
XRU 2/3	40	8000	6200
XRU 4	60	6000	6304

NOTE: The rpm indicated in the table is approximate. The application must be considered according to the use, the service factor and working conditions.
Il numero di giri descritto in tabella è indicativo. L'applicazione va valutata in base al tipo d'impiego, il fattore di servizio e le condizioni di lavoro.

Type - *Tipo*: **XPR**

USE INOX preloading
Precarica INOX

MATERIALS Stainless steel.

USE It allows to preload easily the elastic element, to predetermine the initial load and the work range. This product is suitable for the realization of pressure sets, calibrators and precision shock absorbers.

MATERIALI Acciaio inossidabile.

IMPIEGO Consente di precaricare facilmente l'elemento elastico, predeterminare il carico iniziale ed il campo di lavoro. Questo prodotto è ideale per la realizzazione di gruppi di pressione, calibratori ed ammortizzatori di precisione.

Type - *Tipo*: **SN5** - Cod. **RE010880**

USE Mini tensioner device
Minitenditore

MATERIALS It is made of plastic material. Bolts and nuts are made of steel.

TREATMENTS Bolts and nuts are made of galvanized steel.

USE Mini tensioners or small pressure units.

MATERIALI Realizzato in materiale plastico. Bulloneria e riscontro in acciaio.

TRATTAMENTI Bulloneria e riscontro in acciaio zincato.

IMPIEGO Piccoli tensionamenti o gruppi di pressione.

Mt: Fixing torque screw / *Coppia di serraggio vite*

INSTALLATION GUIDELINES FOR BELT DRIVERS LINEE GUIDA PER L'INSTALLAZIONE DEI TENDICINGHIA

Fig.1

The belt tensioners RP and RU must be assembled near the driving pulley. They can be positioned also inside the transmission.

I rulli tendicinghia RP e RU devono essere montati vicino alla puleggia motrice. Possono essere posizionati anche all'interno della trasmissione.

Fig.2

Tensioners assembled with pulleys for V-type belt must be assembly inside the transmission system.

I tenditori che montano pulegge per cinghie trapezoidali devono essere montati all'interno del sistema di trasmissione.

Q_i: Initial operation test force given by guidelines of belt manufacturer
Forza iniziale di prova data dai costruttori di cinghie
Q₀: Operational test-force / Forza di prova a regime

In order to obtain the ideal tension must be applied Q_i force in the middle of each section of the belt, verifying that the belt deflection is 16 mm with transmission interaxle distance of 1000 mm. The relevant deflection by shorter or longer centre distance has to be interpolated accordingly. After the first running in period, the belts lose resistance, therefore the operational test-force Q₀ decreased around 20% compared Q_i.

Per ottenere la tensione ideale bisogna applicare la forza Q_i al centro del tratto di ogni cinghia, verificando che la freccia sia di 16 mm per un interasse di trasmissione di 1000 mm. Per trasmissioni con interasse maggiore o minore il valore della freccia va interpolato. Dopo un primo rodaggio le cinghie perdono resistenza, per cui la forza di prova a regime Q₀ decresce di circa 20% rispetto Q_i.

BELT TENSIONING MEASURING INSTRUMENTS / STRUMENTI DI MISURA DELLA TENSIONE DELLE CINGHIE
